For more information: hecequine@yahoo.com

A 5-day intensive tutorial in the diagnostic and therapeutic application of **functional (indirect) techniques** as applied to the cranial, cervical spine and lumbar pelvis area of the canine/feline.

These techniques use the principles of motion testing, inherent tissue motion and motion in relation to the restrictive barrier. Lecture, demonstration and hands-on applied practice of the techniques for the various regions will be given. Emphasis will be placed on palpatory skills.

This tutorial addresses evaluation of:

- Spinal and lumbo-pelvis mechanics
- Sacral mechanics and gait analysis
- Joint mechanics - specific for upper and lower extremities
- Exercise and home programs
- Sequencing principles (advanced courses)
- Class available for Veterinary Practitioners, Physiotherapists, Chiropractors, and those who have a working knowledge of canine biomechanics, anatomy, physiology, and extensive dog handling skills.
